Diego A. Rivada

Product Security Engineer | Backup Team Lead | Cybersecurity
Seattle, WA | diegoarivada@gmail.com | github.com/diegoarivada | diegoarivada.dev

Professional Summary

Product Security Engineer and Backup Team Lead with 3+ years securing commercial aircraft systems at The Boeing Company. Leads security assessments, vulnerability management, and airline customer support to meet FAA and EASA airworthiness and cybersecurity requirements. Experienced in mentoring engineers, coordinating team priorities, and bridging engineering, compliance, and customer stakeholders. Builds and ships secure software on the side, including a Windows app published on the Microsoft Store and a self-hosted AI agent platform.

Skills

- **Leadership:** Team Leadership, Technical Mentoring, Onboarding, Cross-Functional Collaboration, Stakeholder Communication, Agile/Scrum, JIRA
- **Security:** Product Security, Vulnerability Assessment, Vulnerability Management, Penetration Testing, Threat Analysis, Threat Modeling, Log Analysis, Digital Forensics, Reverse Engineering, PKI, SSL/TLS, Certificate Management
- **Tools:** Nessus, Nmap, Wireshark, Kali Linux, Docker, GitHub Actions, CodeQL, gitleaks, Trivy, Generative AI, Prompt Engineering
- **Languages:** Python, Rust, JavaScript, C, C++
- **Networking:** VLANs, WAN, TCP/IP, Infrastructure Management, Proxmox, TrueNAS, UniFi
- **Compliance:** FAA, EASA, DO-326B, DO-356B, DO-178, Aircraft Cybersecurity, Continued Airworthiness, Embedded Systems Security

Professional Experience

Product Security Engineer II – Backup Team Lead
The Boeing Company | Seattle, WA | August 2026 – Present

- Support the Team Lead with coordination, task prioritization, and Agile delivery tracking; assume lead duties when the primary lead is unavailable.
- Lead security assessments of aircraft systems for FAA and EASA cybersecurity and airworthiness compliance.
- Direct Nessus and Nmap vulnerability scanning; triage findings and drive remediation of critical exposures.
- Mentor and onboard new engineers, building training practices and an inclusive team culture.

Product Security Engineer II
The Boeing Company | Seattle, WA | June 2025 – August 2026

- Conducted security assessments of aircraft systems to ensure FAA and EASA regulatory compliance.
- Executed in-depth vulnerability scans with Nessus and Nmap and remediated critical exposures.
- Processed airline Service Requests, performing log analysis and archive reviews for continued airworthiness.
- Mentored new engineers and drove inclusion efforts during onboarding and team integration.
- Managed Certificate Signing Requests (CSRs) and SSL/TLS configurations for Flask-based web applications.

Product Security Engineer
The Boeing Company | Seattle, WA | February 2023 – June 2025

- Performed security assessments of aircraft systems to ensure FAA and EASA regulatory compliance.
- Executed vulnerability scans with Nessus and Nmap and documented findings for remediation.
- Analyzed logs and archived data to resolve airline Service Requests.

Operations Manager
My Little World | Miami, FL | May 2021 – January 2023

- Managed business and IT operations, improving efficiency through workflow digitization.
- Coordinated technical and administrative teams to speed cross-functional decisions.

Education

M.S., Systems Architecting and Engineering | University of Southern California | Expected December 2028
B.S., Computer Engineering (Cybersecurity Concentration) | Florida International University | 2022

Certifications

- Effective Prompt Engineering with Chat AI

Projects

- **UpdateAll (Microsoft Store):** Python Windows app that updates Windows, winget apps, npm and pip packages, and drivers from one window. Runs without admin and elevates only for Windows Update. Published November 2026.
- **EarDeck:** Free AirPods tray app for Windows in Rust and Tauri. Threat-modeled, no admin rights or drivers, and sends no data anywhere. Submitted to the Microsoft Store.
- **UltroBot:** Self-hosted AI agent platform on local models with chat, coding agents, and a video pipeline. Invite-only accounts, passkey sign-in, HMAC-signed links, and human approval for every GitHub push.
- **Homelab:** Proxmox, TrueNAS, and UniFi with an isolated IoT VLAN, no open ports, and weekly VM backups.
- **Hackathons:** AR/VR, cybersecurity, and ML/AI hackathons, including a ShellHacks banking GUI on Capital One APIs.
